Applicant: Kenneth Smith et al.

Serial No.: 10/743,662 Filed: Dec. 22, 2003 Docket No.: 10013804-1

Title: MRAM WITH CONTROLLER

IN THE CLAIMS

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of the claims:

1. (Original) A memory card comprising:

a magnetic random access memory (MRAM) array that comprises a plurality of magnetic memory cells; and

a controller coupled to the MRAM array;

wherein the controller is configured to communicate with a host device, and wherein the controller is configured to perform an error correction function associated with at least one of the plurality of magnetic memory cells.

- 2. (Original) The memory card of claim 1 wherein the controller comprises an error correction module, and wherein the error correction module is configured to perform the error correction function.
- 3. (Original) The memory card of claim 2 wherein the error correction module comprises Reed-Solomon encoding and decoding devices.
- 4. (Original) The memory card of claim 3 wherein erasure encoding is implemented into the Reed-Solomon decoding device.
- 5. (Original) The memory card of claim 2 wherein the error correction module is configured to perform a data layout algorithm.
- 6. (Original) The memory card of claim 1 wherein the controller comprises a sparing module, and wherein the sparing module is configured to perform the error correction function.

Applicant: Kenneth Smith et al.

Serial No.: 10/743,662 Filed: Dec. 22, 2003 Docket No.: 10013804-1

Title: MRAM WITH CONTROLLER

7. (Original) The memory card of claim 6 wherein the sparing module is configured to implement sector sparing.

- 8. (Original) The memory card of claim 1 wherein the controller is configured to perform the error correction function in response to a write operation.
- 9. (Original) The memory card of claim 1 wherein the controller is configured to perform the error correction function in response to a read operation.
- 10. (Original) A system comprising:

a host device; and

a memory card coupled to the host device, the memory card comprising a magnetic random access memory (MRAM) array that comprises a magnetic memory cell and a controller coupled to the MRAM array;

wherein the controller comprises an error correction module and a sparing module, and wherein the controller is configured to cause error correction functions to be performed using the error correction module and the sparing module.

- 11. (Original) The system of claim 10 wherein the host device comprises an input / output (I/O) controller that comprises a first interface and a second interface that differs from the first interface, wherein the memory card comprises a third interface, and wherein the third interface is coupled to the first interface.
- 12. (Original) The system of claim 10 wherein the host device comprises a first Smart Media interface, wherein the memory card comprises a second Smart Media interface, and wherein the memory card is coupled to the host device using the first and second Smart Media interfaces.
- 13. (Original) The system of claim 10 wherein the error correction module comprises Reed-Solomon encoding and decoding devices.

Applicant: Kenneth Smith et al.

Serial No.: 10/743,662 Filed: Dec. 22, 2003 Docket No.: 10013804-1

Title: MRAM WITH CONTROLLER

- 14. (Original) The system of claim 13 wherein erasure encoding is implemented into the Reed-Solomon decoding device.
- 15. (Original) The system of claim 10 wherein the sparing module is configured to implement sector sparing.
- 16. (Original) The system of claim 10 wherein the sparing module is configured to implement row sparing.
- 17. (Original) The system of claim 10 wherein the sparing module is configured to implement column sparing.
- 18. (Original) A method performed by a memory card that comprises a controller and a magnetic random access memory (MRAM) array coupled to the controller comprising:

detecting a data transfer command associated with at least one magnetic memory cell in the MRAM array from a host device; and

performing an error correction function associated with the data transfer command.

19. (Original) The method of claim 18 further comprising:

performing the error correction function using an error correction module in response to the data transfer command being a write command.

20. (Original) The method of claim 18 further comprising:

performing the error correction function using a sparing module in response to the data transfer command being a read command.

21. (Original) A memory card comprising:

a magnetic random access memory (MRAM) array that comprises a plurality of magnetic memory cells; and

a controller coupled to the MRAM array;

Applicant: Kenneth Smith et al.

Serial No.: 10/743,662 Filed: Dec. 22, 2003 Docket No.: 10013804-1

Title: MRAM WITH CONTROLLER

wherein the controller is configured to communicate with a host device, and wherein the controller comprises a means for performing an error correction function associated with at least one of the plurality of magnetic memory cells.

- 22. (Original) The memory card of claim 21 wherein the means is for performing the error correction function in response to a write operation.
- 23. (Original) The memory card of claim 21 wherein the means is for performing the error correction function in response to a read operation.
- 24. (New) The memory card of claim 1 wherein each of the plurality of magnetic memory cells includes a first layer of magnetic film with an alterable direction of magnetization and a second layer of magnetic film with a fixed direction of magnetization.
